

# EQOMED

**iO-ENERGIES ITALIA SRL**

**PRESENTATION**

Engineers of **iO-ENERGIES** company

for 22 years have been developing and improving the method of treatment of various serious diseases by means of the patented «Method of changing the structure of human blood». This «method» is based on replacing the human intake of drugs, more effective. Namely, processing and transfusion of a person's own blood with the help of «extracorporeal blood processing equipment» – **EQOMED** device.

«Method» allows us to exclude the application of a number of means used for diagnosis, treatment and prevention of diseases, chemotherapy, radiation and other traditional methods used in medicine.

With **EQOMED** we have the opportunity to apply directed treatment of exactly the pathology that is manifested in the human body.

Drug treatment does not eliminate the main cause that leads to the failure of human organs - imbalance of expression of p53 protein isoforms. According to WHO, about twenty million new cases of cancer and about ten million with fatal outcome are detected annually in the world.

The development of anti-cancer therapy methods is currently going in several directions at once and all of them are important. After all, having learned to manage the immune response as effectively as malignant tumors do, mankind will be able to finally «outplay» this disease, which remains one of the main causes of mortality in the world.

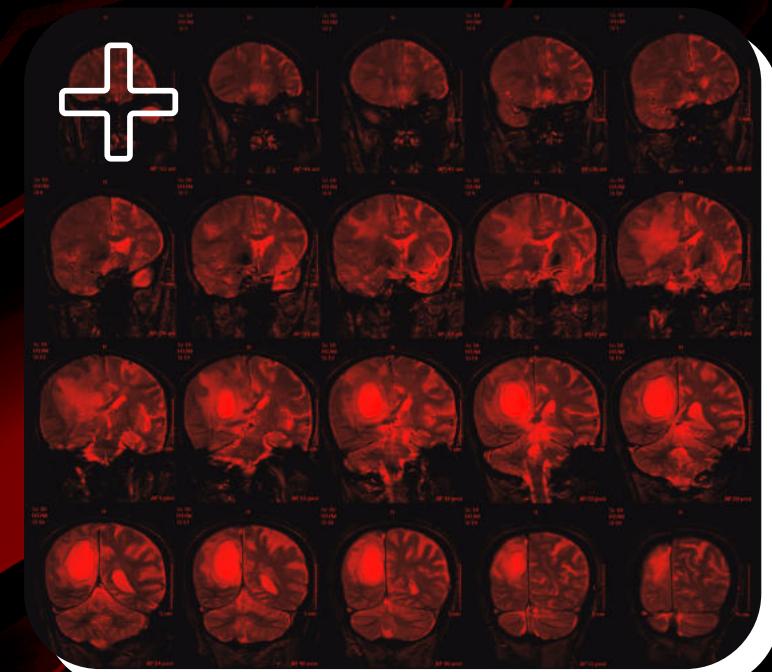

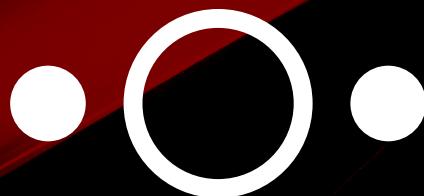

**Every organ, every cell of the human body has its own frequencies and is very sensitive to the world around us. Harmful substances in the atmosphere and various electromagnetic fields disrupt the rhythm of a healthy organism. This may be the cause of various neoplasms, which often mutate and turn into malignant tumors with metastases. To date, medicine does not know exactly what the consequences of taking materials for biopsy or histology from neoplasms and at what rate such analysis can excite the growth or mutation of cells in the neoplasm. But most importantly, there is still no accurate analysis of the gender of the cells of neoplasms: are they female or male?**

**From the point of view of traditional medicine, cancerous tumors can be destroyed, but no one can give a guarantee on this and therefore each case is different and develops differently.**

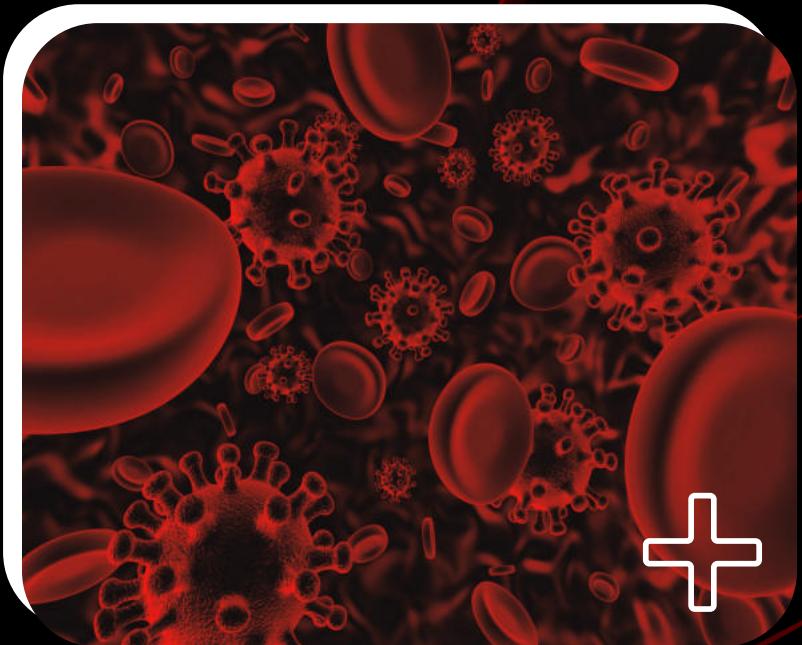

**Cancer cells have not only their own circulatory system, but also their own «intelligence», which knows and understands everything thoroughly, even the fact that now the tumor will be applied to chemotherapy or radiation.**

**How?**

**Let's break it down in order.**

If a biopsy is taken, it shows a benign tumor.

Then, for the reliability of the conclusion, a histology analysis is taken, and it is at this point that the pathway for cancer cells to enter the body from the film (shell) that held it all in a closed «capsule» is revealed.

So what do the tests give? The tests again point to benign tumor cells and mild therapy begins. But within two to five days these cells mutate and malignant cells are formed, as the «intelligence» of the tumor has decided to «punish» those responsible for such an intervention. The cancer cells «fall asleep» and any therapy simply does not see them.

Therapy bypasses them because cancer cells can «turn off» and «turn on» their presence in the body becoming invisible. Once the prescribed chemotherapy is over, the tumor's presence and activity in the body is «turned on» again.

In addition, it already with a more brutal onslaught begins to consume healthy cells, becoming stronger, which provokes a more aggressive growth of metastases.

By shutting down one organ after another, the cancerous tumor tells itself that it is very smart and will see it through to the end. But that's not always the case.

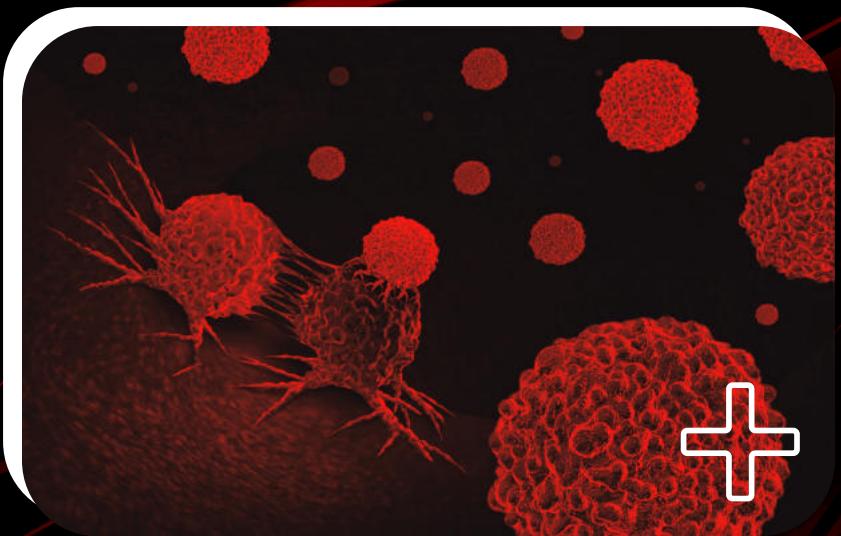

A cancerous tumor progresses only when the patient knows the bad outcome. But if a person is set up for life and indifferent to the disease, then the cancer cells begin to retreat. Sedentary and monotonous lifestyle and, of course, stress, trigger the mechanism of oncology development. Undoubtedly, everything depends on each of us and the way we live in this world.

**WE HAVE DECIDED TO CHANGE THE WAY WE TREAT ONCOLOGY & OTHER DISEASES!**

We have developed an incredibly effective method of targeting cancer cells.

«Method of changing the structure of human blood», which not only gives hope for recovery, but also confidence in the positive outcome of the disease.

Most importantly, it is completely harmless to the entire human body. Without drug therapy, without radiation and other traditional methods, we safely conduct transfusion of a person's own blood with the help of equipment for extracorporeal blood processing «EQOMED». The work of the device is based on the effect of the electric field on the blood at the moment of its flow in the channel between the electrodes into the patient's circulation system with subsequent reinfusion.

The electrodes themselves are made of gold, 999 platinum and coated titanium.

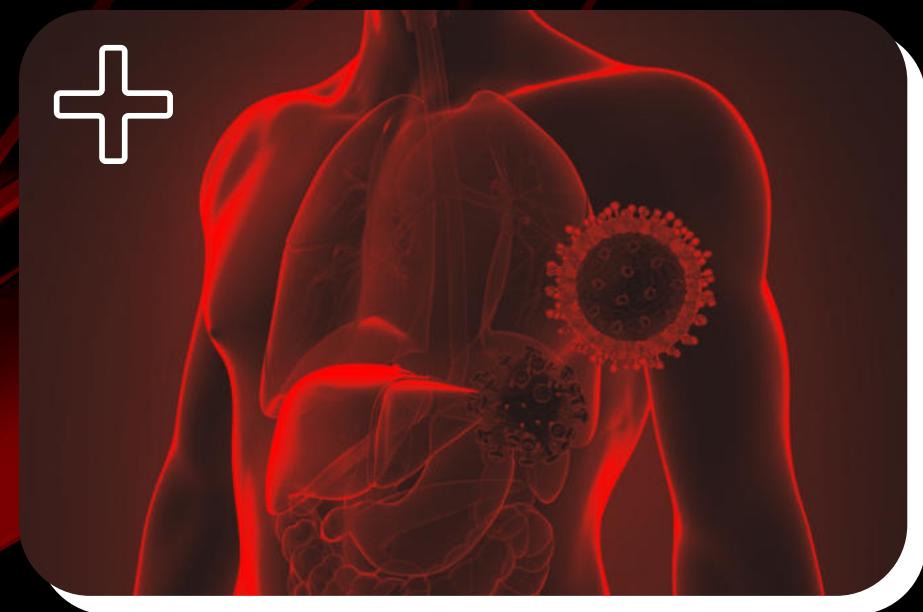

The **EQOMED** device is integrated into a system of electronic devices that can be fine-tuned for each individual patient. The **EQOMED** human blood processing device not only changes the structure of human blood, but can also be customized to 27,000 different parameters for each individual

patient. These parameters take into account the nature of the disease, age, weight, shape and stage of the disease, and on this basis the human blood processing is initiated.

We declare (it is proved and officially confirmed by Munich Consilium) that this type of treatment of various types of cancer has no analogues and demonstrates unrivaled effect of treatment: breast cancer, prostate cancer, lung cancer, brain cancer, leukemia - in these diseases we can turn a white blood cell into a red one with a negative field.

We declare that AIDS, Ebola and Zika viruses, malaria, infectious diseases, hepatitis, diabetes, COVID-19, peptic ulcer and other diseases, are the result of «mood malfunction» of the body and these infusions can be restored without harm and psychological stress for the patient.

We claim that an accurate understanding of our method, gives confidence in the treatment of epilepsy and weak nerve cell bundles in brain lesions. This method is excellent in that, being totally harmless, it results in guaranteed recovery. We claim that by thinning the blood by 5.46%, we can trigger the mechanism of DNA repair, the brain's connection to organs and body parts, thereby preventing many diseases that shorten human life.

**Do you have a question: how and what does our equipment do?**

**Imagine for a moment a high body temperature.**

**Normally, we take a well-known medication – Paracetamol**

**or another antipyretic.**

**The taken drug enters the bloodstream and starts to act by changing the blood formula. So, we can customize the treatment of blood with our equipment in such a way that we change the blood formula to the level of exposure to Paracetamol.**

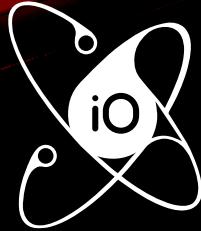

**In case we are talking about the treatment of cancer cells, here we will apply initially strengthening the body settings of electronic equipment, and then begin the destructive effect on cancer cells. Thus, we will leave no chance for the cells to develop and they will be completely destroyed.**

**At the final stage of such therapy, the mechanism of protective block, which is lost by the organism in the fight with cancer cells, will be launched.**

The application of the **EQOMED** equipment is published  
(under the number **WO201303050882**)  
and registered with the Swiss International Patent Office WIPO.

We apologize for the fact that the mechanism of action of our equipment is not fully disclosed, as it is not only a trade secret, but the physical aspects of this method are the basis of our other technologies.
