

ionidin

iO-ENERGIES ITALIA SRL

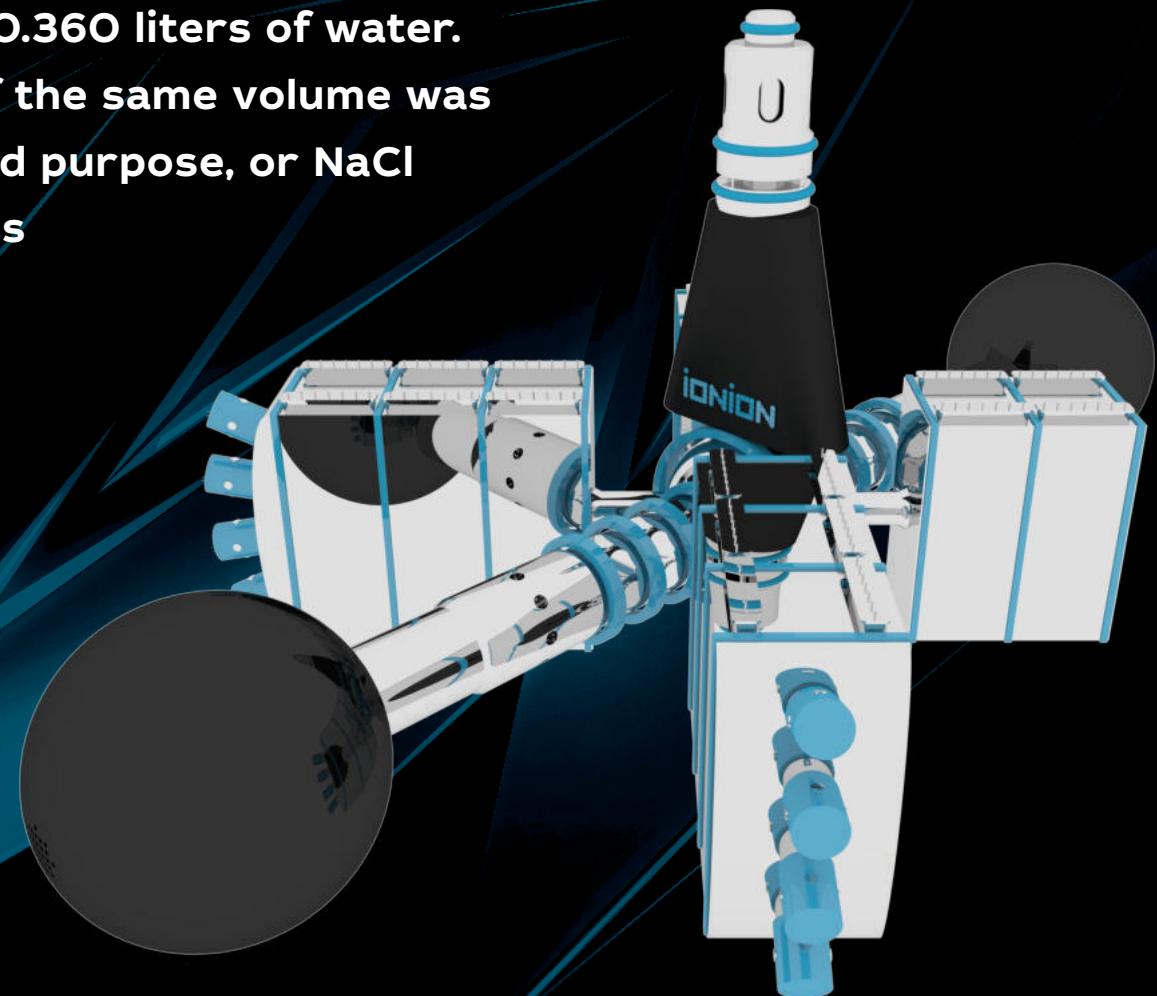

PRESENTATION

The unipolar ion generator **IONION** is the magnum opus of **iO-ENERGIES** and the future of energy.

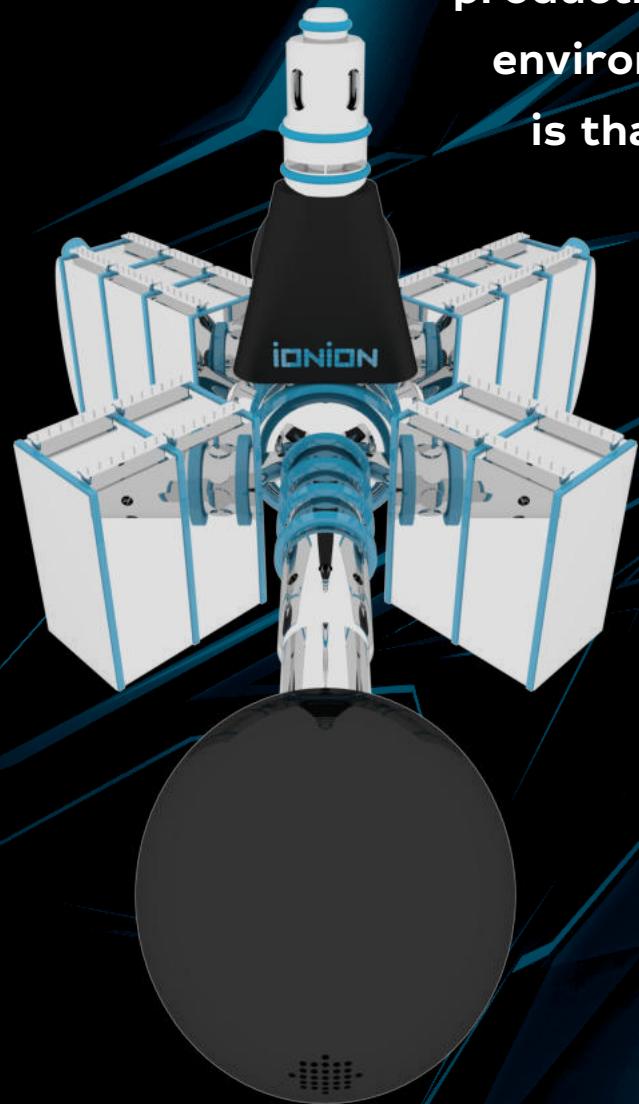

This development is unique due to the use of salt water of any concentration. No negative impact on the environment, no emissions into the atmosphere.

When **IONION** was tested, an impressive **16 000 kW·h** of absolutely clean electrical energy was obtained from 0.360 liters of water. From the used salt water, distilled water of the same volume was obtained, which can be used for its intended purpose, or NaCl can be re-concentrated, making the process of generating electrical energy permanent.

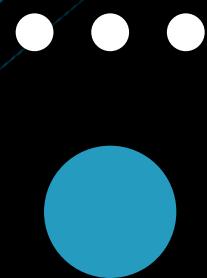

A small room, with an **IONION** device installed, can generate electricity for villages, highways, and cities without incurring the high cost of transporting energy from source to consumer.

IONION energy technology will reduce the cost of utility rates, reduce the cost of any production and manufactured products, and help in the fight against environmental problems. An important advantage of the **IONION** device is that it can be easily installed in hard-to-reach places such as islands and sparsely populated areas.

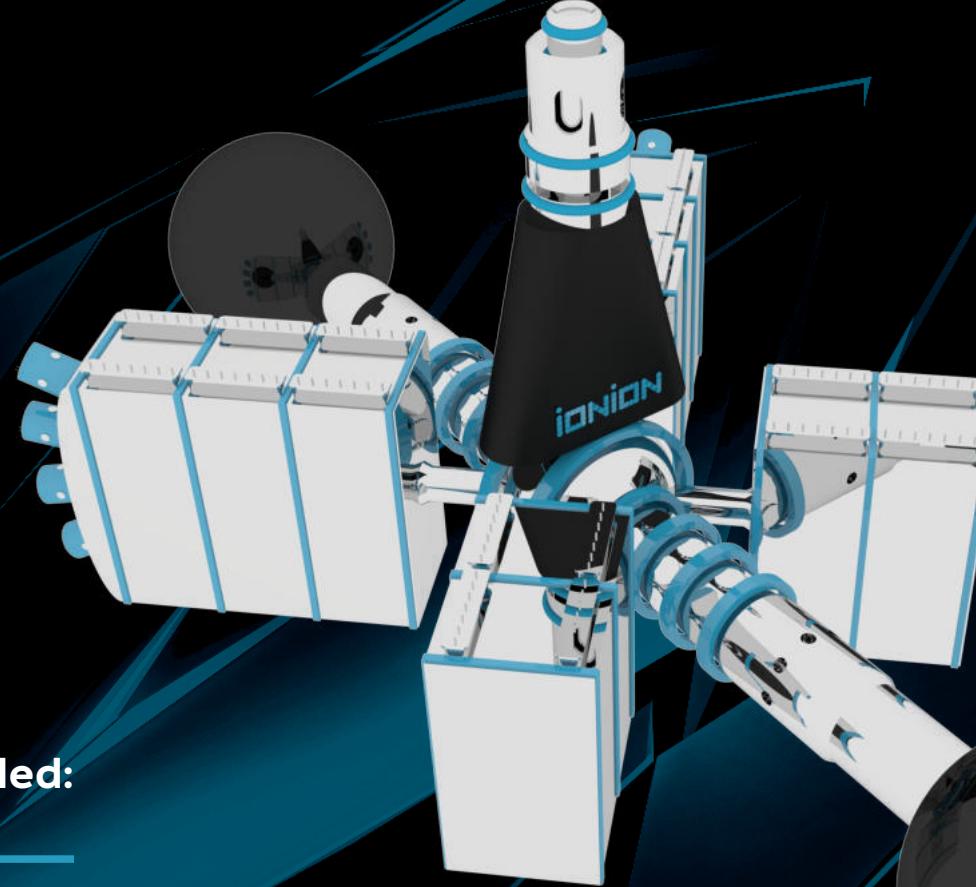

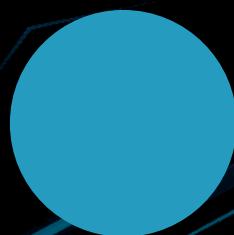

The use of **IONION** is also applicable to marine vessels by generating seawater, it is guaranteed to stay in the seas and oceans without the need for hydrocarbon fuel.

The search for special materials, powerful **2.5 Tesla** magnets, and alloys with unusual shapes has brought us to specialized, modern companies that provide us with all the necessary components. Ion traps, which store **16 MW** of powerful energy, are manufactured exclusively at **iO-ENERGIES**.

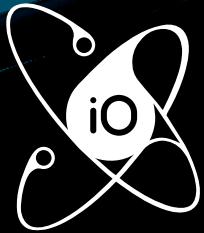

XXX

Dimensions of the equipment assembled:

L x W x H - 1500 x 1300 x 800 mm.
