

# COMPANY

**iO-ENERGIES ITALIA SRL**

**PRESENTATION**

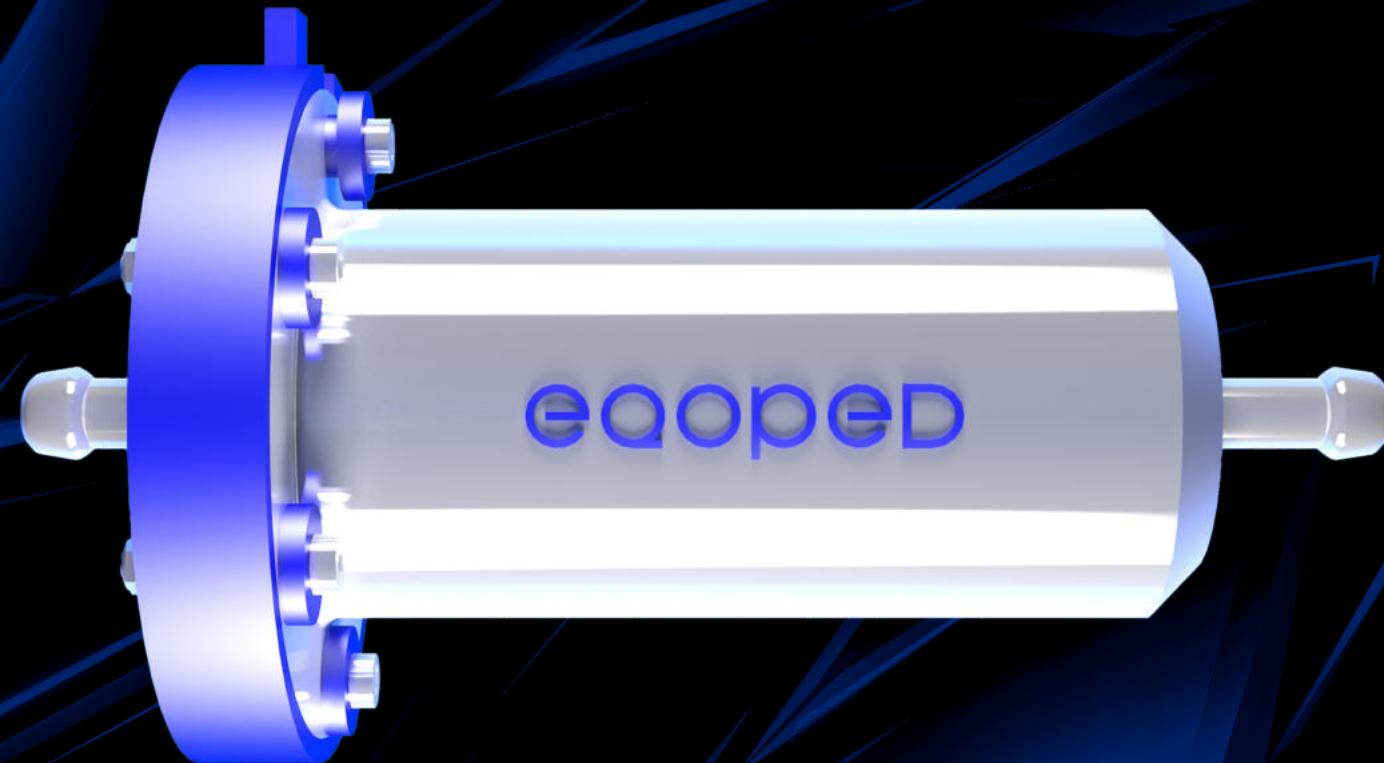

## Company iO-ENERGIES

The innovative company **iO-ENERGIES** began its thorny path in 2005.

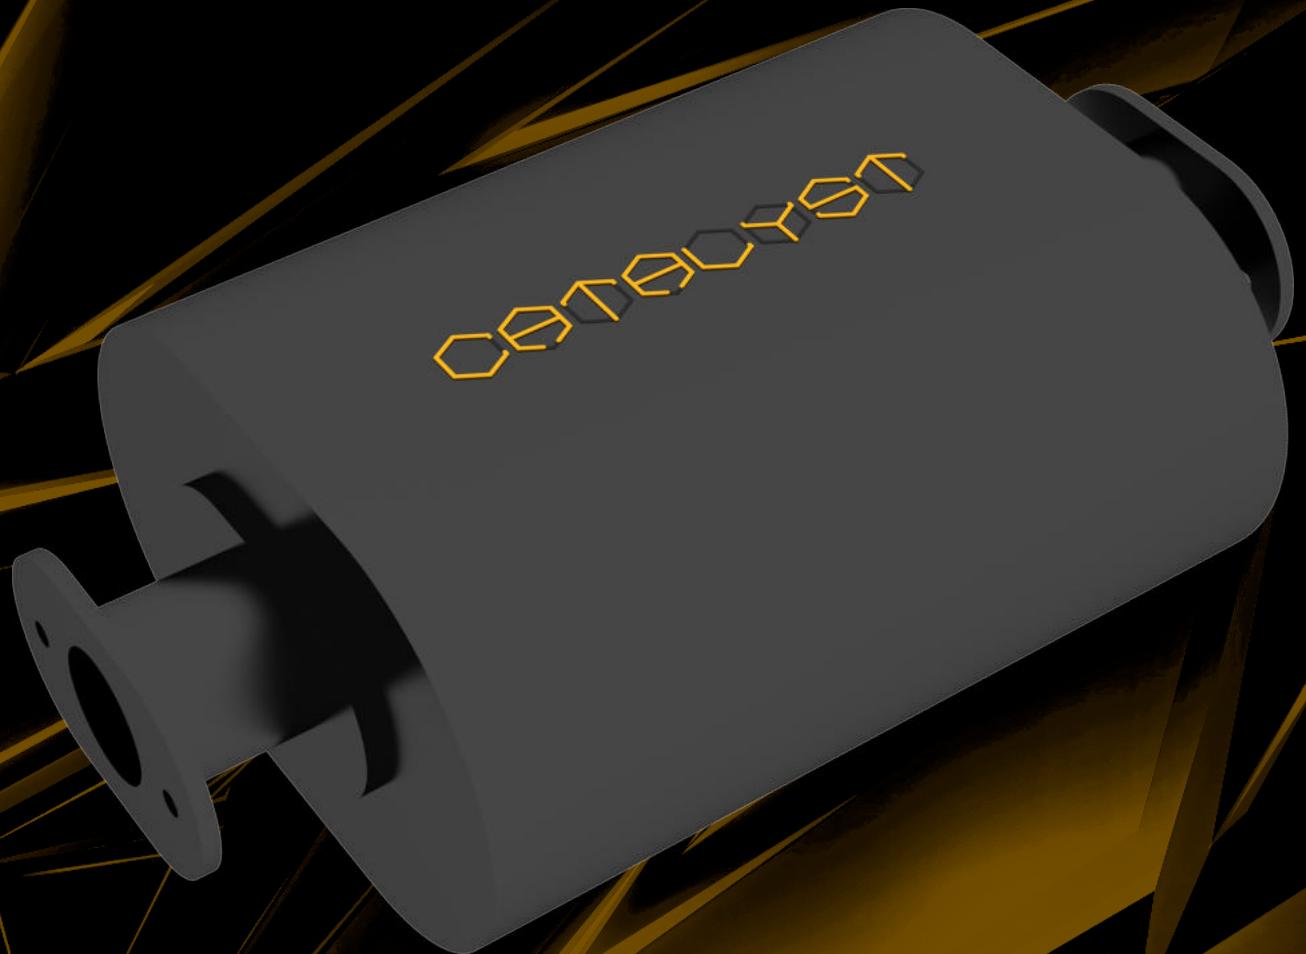

The ideological leader and founder of the company, gathered around him an initiative group of people from different corners of the planet, of different ages, views and crafts, to implement important, in the scale of human civilization, innovative-technological products.

After a long journey in search of a place under the sun, the team, in 2015, settled in Italy, deliberately surrounding itself with the best industrial plants in the world.

During 18 years of continuous work, numerous patents have been registered, dozens of prototypes have been designed and recreated, hundreds of tests have been carried out on specialized test benches, on the basis of which all the necessary certificates and authorizations for production and sale have been obtained.

**EQOPED.** Electromagnetic fuel catalyst that reduces fuel consumption by up to 29%. By changing the structure and viscosity, the fuel is completely burned in the internal combustion engine, which leads to an increase in engine efficiency, reducing not only fuel consumption, but also the amount of harmful emissions.

**CATALYST.** Catalytic converter, innovatively designed to reduce emissions by up to 95%. It has no resistance and does not reduce engine power. The technology is applicable to all types of internal combustion engines.

**EQOMED.** Human blood processing equipment, for the potential treatment of various types of diseases, especially: oncology, EBOLA, Zika, HIV and COVID 19 viruses.

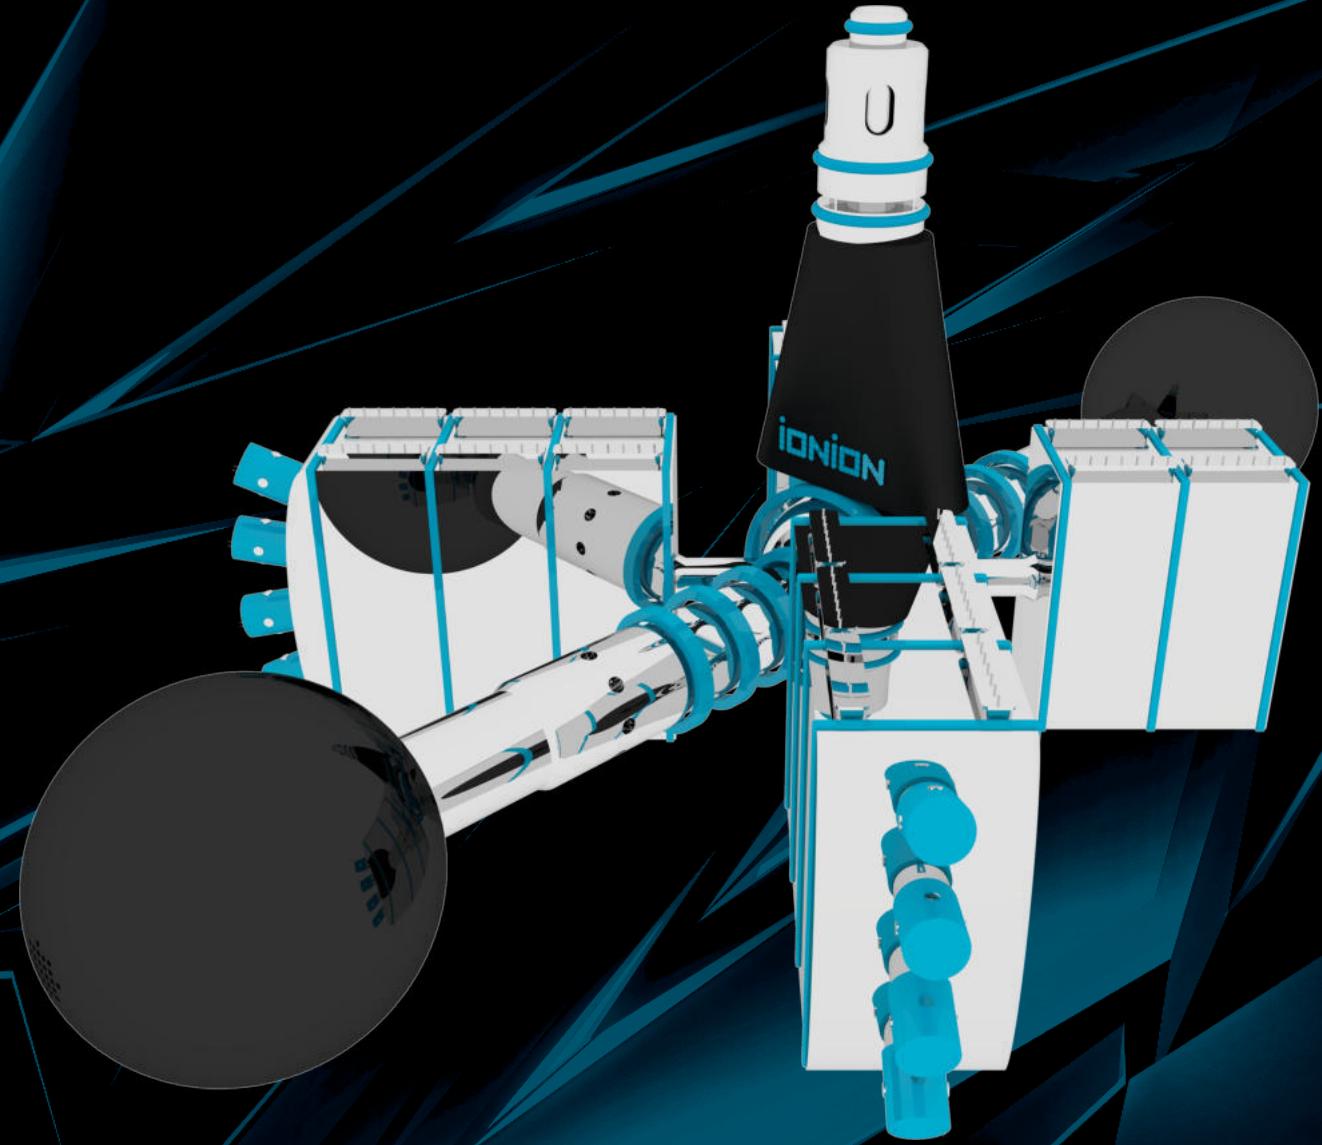

**ORIUS.** The unit purifies, in a short period of time, any hydrocarbons, reducing the sulfur level to 3 ppm, which guarantees better quality of petroleum products, cleaner exhaust of engines and their durability.

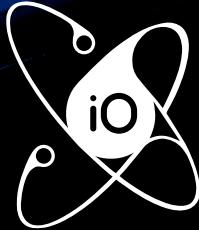

**IRBIS.** Continuous charging equipment for electric vehicles. The efficiency of this technology saves drivers from stopping at electric refueling stations. Also, with IRBIS pre-installation, the need for a large number of batteries will be reduced, thus reducing the weight and cost of the electric vehicle.

**FOREST.** Equipment for purification of air harmful to humans and the environment. The compact size of this equipment gives an unrivaled result, comparable to the cleaning of pollutants from 12000 cars or 70,000 m<sup>3</sup> of polluted air.

**IONION.** Magnum opus of iO-ENERGIES company. A complex of innovative components generating electric power up to 16000 kW using only salt water in the amount of ~0.360 l/hour.
